Work Experience

Great Lakes Reality Labs   *Aug 2022 - Current*

Lead Backend Developer

- Spearheaded the reconstruction of the unfunctional API with NestJS and PostgreSQL, drastically reducing the timeframe required to release the flagship application to production.
- Implemented cron jobs to update large sets of database records, eliminating the need for manual user intervention.
- Continual contribution to architecting, designing, and developing new features following Agile development methodologies.

Cognizant   *Jan 2020 - Jan 2024*

Full Stack Engineer

- Led the development of a Spring Boot microservice to handle sensitive document uploads.
- Assisted in the development of microfrontend applications (React, Angular, and Lit) that accelerated the investigation and auditing process for clients, boosting overall productivity.
- Utilized Cypress, Cucumber, and JMeter to implement tests for all layers of our application to validate functional and performance requirements.

Revature   *Oct 2019 - Jan 2020*

Associate Full Stack Developer

- Extensive training in full stack development with modern technologies and frameworks.
- Helped develop a real-time employee notification system for an enterprise Angular application.

Skills

Languages: JavaScript, TypeScript, Java, Python
Backend: Node.js, Spring Boot
Frontend: Angular, React, Redux, HTML, CSS
Database: PostgreSQL, MongoDB
Tooling: AWS, Docker, Git, Jira

Certifications

AWS Certified Solutions Architect - Associate

Education

University of California, Santa Barbara   *2019*

BA, Biological Anthropology
