Work Experience

Great Lakes Reality Labs   *Aug 2022 - Current*
Lead Backend Developer

- Reconstructed the unfunctional API using Nest.js, integrated with a PostgreSQL database, drastically reducing the timeframe required to release the flagship application to production.
- Implemented cron jobs to update large sets of database records, eliminating the need for manual user intervention.
- Continual contribution to architecting, designing, and developing new features following Agile development methodologies.

Cognizant   *Jan 2020 - Jan 2024*
Full Stack Engineer

- Designed and implemented a Spring Boot microservice to handle sensitive document uploads by internal users.
- Assisted in the development of microfrontend applications (React, Angular, and Lit) across multiple teams, accelerating the auditing processes for users and organizations.
- Utilized Cypress, Cucumber, and JMeter to implement tests for multiple applications, improving overall API quality and performance.

Revature   *Oct 2019 - Jan 2020*
Associate Full Stack Developer

- Trained extensively in full stack development with modern technologies and frameworks.
- Helped develop a real-time employee notification system for an enterprise Angular application.

Skills

Languages: JavaScript, TypeScript, Java, Python
Backend: Node.js, Spring Boot
Frontend: Angular, React, Redux, HTML, CSS
Database: PostgreSQL, MongoDB
Tools: Docker, Git, GitHub Actions

Certifications

AWS Certified Solutions Architect - Associate

Education

University of California, Santa Barbara   *2019*
BA, Biological Anthropology
