Technical Skills

Languages: Java, Python, Go, JavaScript/TypeScript

Backend & Cloud: Spring Boot, FastAPI, Node.js, AWS, Docker, Kafka, Redis, OpenTelemetry

Frontend: React, Angular

Databases: PostgreSQL

Experience

Senior Software Engineer, Capital One

July 2025 – Present

- Leading the architecture and data integration for a RAG-based LLM chatbot, engineering a pipeline to consume historical platform data and documentation to **automate real-time technical support** for **3,000+ engineers**.
- Built **Quill**, an enterprise-wide internal AI-powered developer tool that generates internal technical docs and external docs (endpoints, request/response, setup, troubleshooting) from Git repositories, with an intelligent update mode for significant changes.
- Resolved persistent dashboard timeouts for large organizations by designing a **distributed caching strategy** across Spring Boot microservices. Leveraged **Redis and in-memory caching** to pre-compute and store heavy metrics daily via a cron job, reducing load times from **60s+ to under 300ms** and **ensuring high availability**.
- Designed an OpenTelemetry/New Relic pipeline for a partner team's Go microservices on ECS Fargate, filtering **100M+ messages**, isolating critical events to **reduce ingestion costs**.

Software Engineer III, JPMorgan Chase

July 2024 – July 2025

- Designed a Kafka and Oracle distributed logging architecture, aggregating telemetry across 10 microservices, enabling rapid root cause identification of cascading failures and out-of-memory (OOM) errors during production incidents.
- Optimized batch jobs for **10M+ daily trade records**, **cutting execution time by 20%** by consolidating processing into a single microservice and adding async Kafka triggers.
- Implemented a consistent-hashing strategy for a tax processing Kafka consumer cluster, balancing node load and **reducing processing latency by 15%**.

Backend Engineer (Contract), Great Lakes Reality Labs

Aug 2022 – Feb 2024

- Built the core MVP backend API with Nest.js and PostgreSQL, **accelerating time-to-market by 30%**.
- Developed a job matching engine to efficiently pair students with company roles based on **aggregate skills and eligibility rules**.
- Integrated a backend subscription system, launching the platform's **first revenue-generating feature**.

Full Stack Engineer, Cognizant

Jan 2020 – Jan 2024

- Created a batch job to correct **30,000 data inconsistencies**, unblocking a backlog of enterprise auto loan investigations and audits.
- Migrated a BFF Spring Boot app behind AWS API Gateway, leveraging its built-in JWT authentication and **limiting ingress traffic** for downstream microservices.
- Integrated an Angular microfrontend into Salesforce, overcoming strict file size limits and **avoiding a costly platform migration** by extending the legacy system's lifecycle.

Certifications

AWS Certified Solutions Architect - Associate

Jan 2024 – Jan 2027

Education

Georgia Institute of Technology – M.S. in Computer Science (AI Specialization)

Expected 2027

University of California, Santa Barbara – B.A. in Biological Anthropology

2019
