Technical Skills

Languages: Java, Python, Go, JavaScript/TypeScript

Backend & Cloud: Spring Boot, FastAPI, Node.js, AWS, Docker, Kafka, Redis, OpenTelemetry

Frontend: React, Angular

Databases: PostgreSQL

Experience

Senior Software Engineer, Capital One

July 2025 – Present

- Optimized **storage I/O performance** by delivering a **400x PostgreSQL query speedup (300s to 700ms)** on a dominant Aurora backend via **zero-downtime covering-index migrations**. Eliminated **100% of per-query disk I/O wait**, drastically reducing system latency and resolving production 504s that drove a **25x vCPU oversubscription**.
- Architected a **distributed caching layer** using Redis across Spring Boot microservices to pre-compute heavy data workloads, eliminating timeouts and slashing **data retrieval latency from 60s+ to under 300ms**.
- Engineered core Go service enhancements and an **OpenTelemetry/New Relic** observability pipeline for a partner team on ECS Fargate. Designed selective traces across **100M+ SQS messages** to establish system visibility while **preventing mass ingestion overhead**.
- Built an enterprise-wide **AI-powered documentation engine** that auto-generates API references, schemas, and setup guides from Git repositories, with **intelligent change detection** to keep docs in sync across teams.

Software Engineer III, JPMorgan Chase

July 2024 – July 2025

- Designed a Kafka and Oracle **distributed logging architecture**, aggregating telemetry across **10 microservices**, enabling rapid root cause identification of cascading failures and out-of-memory (OOM) errors during production incidents.
- Optimized **data processing throughput** for batch jobs handling **10M+ daily trade records**, cutting **execution time by 20%** by consolidating processing into a single microservice and adding **async Kafka triggers**.
- Implemented a **consistent-hashing strategy** for a tax processing Kafka consumer cluster, balancing node load and reducing processing **latency by 15%**.

Backend Engineer (Contract), Great Lakes Reality Labs

Aug 2022 – Feb 2024

- Built the core MVP backend API with Nest.js and PostgreSQL, **accelerating time-to-market by 30%**.
- Developed a job matching engine to efficiently pair students with company roles based on **aggregate skills and eligibility rules**.
- Integrated a backend subscription system, launching the platform's **first revenue-generating feature**.

Full Stack Engineer, Cognizant

Jan 2020 – Jan 2024

- Created a batch job to correct **30,000 data inconsistencies**, unblocking a backlog of enterprise auto loan investigations and audits.
- Migrated a BFF Spring Boot app behind AWS API Gateway, leveraging its built-in JWT authentication and **limiting ingress traffic** for downstream microservices.
- Integrated an Angular microfrontend into Salesforce, overcoming strict file size limits and **avoiding a costly platform migration** by extending the legacy system's lifecycle.

Certifications

AWS Certified Solutions Architect - Associate

Jan 2024 – Jan 2027

Education

Georgia Institute of Technology – M.S. in Computer Science (AI Specialization)

Expected 2027

University of California, Santa Barbara – B.A. in Biological Anthropology

2019
